Hitchkicker's guide to cinema Ideation

Project idea

The Idea is to restart from the Hitchhickers' guide to cinema resulted from the previous course about React and convert it to be a React Native app. The main goal in doing so is to redefine the various components as native components, and restructure the various layouts to be more "mobile-friendly".

For further info about the original projects, features and goals, please refer to the doc related to the previous steps of the project available at:

- Bootstrap project
  - https://github.com/sterte/h2gc/tree/master/doc/Course%201%20-%20Bootstrap
- React project (starting from bootstrap project)
  - https://github.com/sterte/h2gc/tree/master/doc/Course%202%20-%20React

Two proof-of-concept websites resulting from the previous courses are available at:

- Boostrap POC
  - http://sterte.rf.gd/h2gc/
- React POC
  - https://h2gc-react.web.app/

Features

No new features will be introduced, as a matter of fact the project consist in a "translation" from react to react native, and implicitely form a web app to a mobile app.

Market Survey

Market survey has already been performed in the initial step of the project (Bootstrap course), please refer to Bootstrap course ideation doc, available at:

https://github.com/sterte/h2gc/blob/master/doc/Course%201%20-%20Bootstrap/Hitchickers%20guide%20to%20cinema%20-%20Ideation.pdf

References

References have already been performed in the previous phase of the project (Bootstrap course), please refer to Bootstrap course ideation doc. available at:

https://github.com/sterte/h2gc/blob/master/doc/Course%201%20-%20Bootstrap/Hitchickers%20guide%20to%20cinema%20-%20Ideation.pdf
